

ABSTRACT

A METHOD OF MANIPULATING AN ALREADY SENT E-MAIL AND CORRESPONDING SERVER

5

sub
A e-mail.

The invention relates to a method of manipulating an already sent

According to the invention, the method consists in routing a sent e-
10 mail to a server storing at least the e-mail body and sending only a
notification to the addressees.

In particular the server associates an access code to the e-mail, that
is sent together with the notification, so that the addressees may retrieve the
sent e-mail. The sender of the e-mail may access the e-mail body stored at
15 the server to modify or suppress it. The condition for the modification to be
accepted by the server is that none of its addressees has read the sent e-
mail, when the sender wants to manipulate the sent e-mail.
